

Color a Conservator!

After archaeologists excavate an artifact, it goes to the conservators in the lab. It is the conservator's job to scientifically clean and treat an artifact so that it will last for a long time. Conservators use many different tools such as brushes, scalpels, and microscopes to study, clean, and preserve objects.

Once you have finished coloring your conservator have an adult show you what he looks like in real life by visiting: <https://historicjamestowne.org/jr-kids-at-home> #colorourcollections #JRKids
